

Virtual Sets

Use TriCaster virtual sets to get the look of a high-end studio without committing to the expense, space and inflexibility of constructing a studio set. Using any of TriCaster's included set designs with multiple angles and styles, you can jump right in, place your talent into a network-style environment with realistic camera movements, and look like the real thing.

Take a tour of TriCaster's stock sets and make your next live impression your best one.

Holographic Virtual Sets

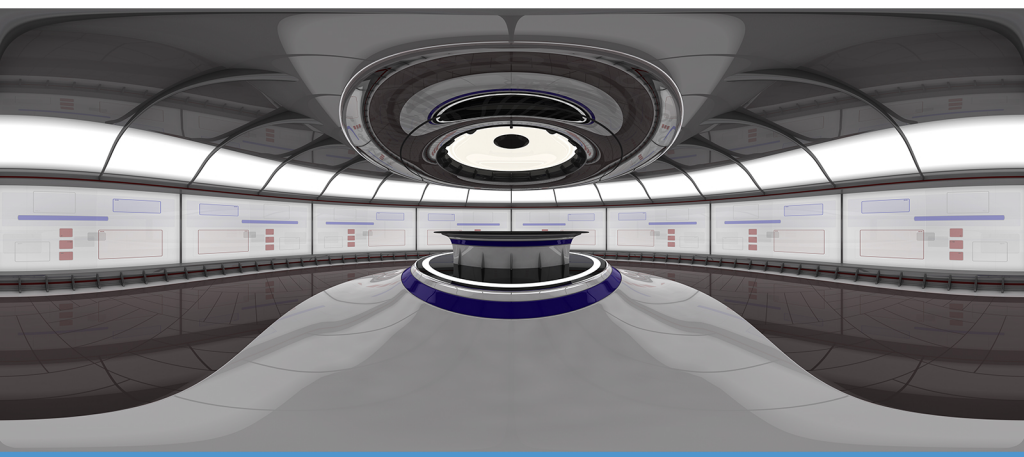

Holographic virtual sets are 360-degree virtual environments that can be created from your own 3D models, or with panoramic images snapped with a smartphone or camera, when you use Virtual Set Editor (VSE) 2.5. We've included a few samples in each TriCaster pro line model so you can experiment hands-on with taking your vision to the next dimension.
